21. Can trees talk? Yes, but not in words. Scientists have reason to believe that trees do communicate (交际) with each other. Not long ago, researchers learned some surprising things. First a willow tree attacked in the woods by caterpillars (毛虫) changed the chemistry of its leaves and made them taste so terrible that they got tired of the leaves and stopped eating them. Then even more astonishing, the tree sent out a special smell—a signal (信号) causing its neighbors to change the chemistry of their own leaves and make them less tasty.

Communication, of course, doesn't need to be in words. We can talk to each other by smiling, raising our shoulders and moving our hands. We know that birds and animals use a whole vocabulary of songs, sounds, and movements. Bees dance their signals, flying in certain patterns that tell other bees where to find nectar (花蜜) for honey. So why shouldn't trees have ways of sending message?

22. Something else could be coming soon to a vehicle near you: more technology, the kind that could help your car talk to others around it. Unlike some proposed cars of the future, it would not actually do the driving for you. But it could warn you about what other drivers are doing. The U.S. government may require this feature in the future, but it would add to the cost of the car.

Vehicles of the future could be cars that talk to the driver and each other. The U.S. government wants them on the road soon, pushing for technology that would warn drivers of danger coming from any direction.

It's called vehicle-to-vehicle technology. Cars would send wireless messages to each other within about 300 yards, communicating information like speed, direction and GPS position ten times per second. When cars share this information, they can account for all the vehicles around them, which means they are able to identify possible crashes.

The technology sees around corners, over hills and through other vehicles. For example, my car will tell me that there are five cars just ahead of me, and I can slow down beforehand while the vehicle ahead sends my car a message giving me enough time to react.

33,000 Americans are killed and 2.3 million injured in car crashes every year. The Department of Transportation (DoT) predicts, talking cars could prevent up to 80 percent of crashes involving sober drivers.

Five major car companies have been working with DoT on developing and testing the technology. 3,000 cars are already using it as part of a government pilot test. Sometime after 2016, the U.S. government hopes your car will be able to communicate with you.

While DoT hopes to make this technology the rule by 2016, it will still need the public to weigh in before anything is finalized. Now, as for privacy, the government says that data sent between cars doesn't record personal information, so your privacy should not be compromised.

23. There is no denying that students should learn something about how computers work.For people should have some basic idea of how the things that they use do what they do. Further, students might be helped by a course that considers the computer's impact on society.Computer literacy is not a form of literacy (读写能力); it is a trade skill.

Learning how to use a computer and learning how to program one are two distinct activities. The competent citizens of tomorrow should free themselves from their fear of computers. But this is quite different from saying that all ought to know how to program one. Leave that to people who have chosen programming as a career. While programming can be lots of fun, and while our society needs some people who are experts at it, the same is true of auto repair and violin-making.

Learning how to use a computer is not difficult, and it gets easier as programs become more “user-friendly” . Let us assume that in the future everyone is going to have to know how to use a computer to be a competent citizen. What does the phrase “learning to use a computer” mean? It sounds like “learning to drive a car” , that is, it sounds as if there is some set of definite skills that, once acquired, enable one to use a computer.

In fact, “learning to use a computer” is much more like “learning to play a game” , but learning the rules of one game may not help you play a second game, whose rules may not be the same. There is no such a thing as teaching someone how to use a computer. One can only teach people to use this or that program and generally that is easily accomplished.

综合题 (20.0 分)

(1) To be the competent citizens of tomorrow, people should understand that programming a computer is more essential than repairing a car.
